

Lab Reflection

- Spencer Cornish
- Week of 03-03-2019
- CSCI 127 – Th 4:00–6:00pm

Section I. What students understood

This week's lab was about classes, and I feel as though most students felt pretty comfortable with all of the new content. They typically understood why classes existed, and how to manipulate data.

Section II. What students didn't understand

Students struggled with the naming of variables, and how that differs from the naming of function definitions in the program. I think that some students would feel more comfortable with definite declarations, rather than implied ones in the constructor, but that is more of a language limitation rather than a class one.

Section III. How the assignment that you helped out with might be improved

Nope!

Section IV. What you personally learned with respect to one or more of the course outcomes listed in the next section

I feel as though this lab did what most do, and helped me to become a better asker of leading questions. This really helped the students to understand in their own ways.
